

# Jaxon Burningham

Full Stack Developer

## Profile

I am a passionate developer that thrives in a fast-paced work environment. I enjoy working in teams and setting deadlines for myself and/or team in order to deliver quality, reusable code. I perform best in workplaces that are constantly challenging me and pushing my limits.

I often find the best ways to optimize code, at Neutron Interactive I was able to improve some of our most used endpoints to halve the amount of queries we were using. Along with that, I was able to reduce the amount of time our tests took from 16 minutes down to 6 minutes.

## Employment History

### Full Stack Developer at Ionrev, Pleasant Grove

May 2020 — August 2021

- Collaborated in a team to push out features quickly and effectively.
- Met application goals with frameworks like Vue and Feathers/Node.
- Adapted websites to match changing user preferences and client demands with regular updates.
- Analyzed software requirements and provided solutions.

### Backend Developer at Neutron Interactive, Sandy

August 2021 — Present

- Used Django Rest Framework to build upon our REST API
- Optimized endpoints to double speeds on certain endpoints
- Wrote tests to ensure proper functionality
- Used Celery to queue tasks to reduce workload on the server

## Education
